

Terra[®]
Group

Thanks to your support we have constant impact on shaping urban space- our individual but at the same time common world. Many years of our strong involvement have changed the reality which we currently live in. We deeply believe that our joint activities will make it possible to...

create more
beautiful tomorrow...

FUNCTIONALITY

VERSATILITY

FLOWER TOWERS

USED MODELS:
H2400+W600

They are functional and safe models to shape public space. These models allow to decorate places difficult to arrange, such as large surfaces of cobblestones, asphalt or concrete. The products give limitless possibilities when it comes to selection of colors, species and size of plants. The Flower Towers successfully create the image of European towns and cities.

► WIDE CHOICE OF SHAPES AND SIZES

► BASIC COLOR ZINC COAT

Hot dip galvanizing assures long-term protection against corrosion. During this process durable surface iron-zinc alloy is created.

► LAQUER COLOR DUPLEX SYSTEM

Combination of zinc coating and polyester powder coating gives exceptionally resistible protective surface. The top layer of the paint, which is a decorative part pleasing to the eye, becomes also additional anticorrosive coating.

STANDING FLOWER TOWERS

► WATERING SYSTEM

Watering installation TERRA CLICK TIF is an integrated system adjusted specifically to the Terra Flower Towers. It ensures high precision of watering, limits the time necessary for maintenance and reduces the costs thanks to appropriate water usage.

► NO SHARP EDGES

The unique design of Terra Flower Towers eliminates elements, which could be threatening to user safety. Additionally, the edges of the rings are covered with the rubber gaskets, which also protect the plants against mechanical damage.

► LASER CUT RINGS

Laser cutting used in the production process of the rings is the latest metal machining method. Thanks to this technology the offered products are of the highest quality.

► TRANSPORT MODULE

A functional system, which makes it easier to unload the planted constructions without the risk of damaging the flowers. Safe and durable holder significantly speeds up the process of setting the products in the given area.

► THE FLOWER TOWER SYSTEM

An innovative and patented solution which increases effectiveness and quality of planting. Each ring of the Flower Tower does not have the bottom so the roots of the plants have perfect conditions for growth as they are provided a proper amount of water and air.

► ANTI-THEFT SYSTEM

Safe and durable solution which eliminates losses caused by robberies. Thanks to the stable and durable fixing to the ground, moving the Flower Tower from the dedicated place becomes impossible.

THE HANGING FLOWER TOWERS

► THE FLOWER BALL EFFECT

Taking into account urban architecture, Terra company created the Hanging Flower Towers for the street lamps. They are patented products which are the only flower baskets of this type in Europe. If they are fully planted, they create amazing effect of the flower ball.

► WATERING SYSTEM + DOUBLE BOTTOM

The unique module which controls and provides an appropriate amount of water directly to the root system of the plants. The overflow holes regulate an optimal amount of water in the reservoir, preventing from rotting the plants in case there is too much of it. Additional watering system assures comfort, reducing the costs connected with the maintenance.

► FIXING WHICH FITS TO EVERY KIND OF LAMP

A wide range of fixings makes it possible to install the Hanging Flower Tower on almost every city lamp. The additional surface coating protection and special construction of the holder as well as the material used in its production process guarantee safety use.
