CONCRETE FLOWER POTS

FROST-RESISTANT, INSULATED AND REINFORCED
POTS MADE FROM ARCHITECTURAL CONCRETE

A pot made from architectural concrete will be perfect in a modern arrangement, it will emphasize the charm of plants, grasses and shrubs. Thanks to cubist shapes, it is easy to obtain a modern, monochrome and unique effect.

The pots can be used outdoors as they are frost-resistant. Their high durability is due to the double reinforcement and the wall thickness of 5.5 - 6 cm (depending on the model).

The bottom and walls of the pot have a 2 cm insulation made of styrodur, which protects plants from cold. The pots are secured against the leakage of moisture.

Thanks to waterproofing, they can be placed inside directly on the floor (no additional tray is needed), without fear of damaging the floor.

STYLES AND COLORS OF CONCRETE POTS

Pots are produced in three types of technology

NATURAL POTS

The pots are made of colored concrete and covered with a transparent impregnation. The production method allows to keep the natural concrete appearance with the discoloration and fouling characteristic of this material. Individual items (even from one batch) may slightly differ in color. Thanks to this, each pot is extraordinary and has a unique structure.

LOFT DESIGN POTS

Loft Design pots are distinguished by their industrial character. They are made of mass-colored concrete and protected with a colorless impregnation agent. There are large pores and pits on their entire surface, in addition, discoloration and stains may appear. Individual items, even those from one batch, may differ in color. The original, raw look are the most important features of these pots. They will appeal especially to lovers of loft style.
